

Thredo (Threado) — Company Role Extension

Product Requirements Document (PRD)

Document version	1.0
Date	21 May 2026
Application	Thredo (Threado) — Flutter mobile app
Package	com.app.thredo
Scope	Add Company role alongside existing User (trader) role

Contents

- 1. Executive Summary
- 2. Current State — User Module Analysis
- 3. Company Role — Business Requirements
- 4. Screen-by-Screen Requirements (Company vs User)
- 5. Company List & Approval Workflow
- 6. Company Bottom Navigation
- 7. Data Model Extensions
- 8. API Architecture
- 9. UI/UX Guidelines
- 10. Security & Permissions
- 11. Implementation Phases
- 12. Acceptance Criteria
- 13. Open Questions

1. Executive Summary

Thredo is currently a **user-facing B2B thread marketplace** where traders browse products, match threads by image, discover companies, and manage wishlists. The app

has a single navigation shell and all APIs use the `user/` namespace. The login response already includes a `role` field, but it is **not used** for routing or UI branching.

This document defines requirements to introduce a **Company role** so registered companies can:

- View and manage **only their own products** on a familiar Home-like experience
- Use **Product Reel** and **Product Detail** with appropriate restrictions
- Keep **Category** browsing unchanged
- **Exclude** the Thread Match (image scan) feature
- Access a new **Company List** with an **approval workflow** for cross-company product visibility
- Use a **dedicated Profile** layout showing full company details

2. Current State — User Module Analysis

2.1 Authentication Flow

Step	Screen	Behavior
1	Splash	Logo animation; POST <code>user/images/list</code>
2	Choose Language	First-run language selection
3	Login	Phone (+91), terms acceptance
4	OTP Verification	POST <code>user/auth/otp/verify</code>
5	Bottom Menu	Single shell for all users

2.2 LoginData Model (Existing)

Field	API key	Notes
<code>accessToken</code>	<code>access_token</code>	Bearer token
<code>userId</code>	<code>user_id</code>	User UUID
<code>role</code>	<code>role</code>	Stored but never used in UI
<code>phone</code>	<code>phone</code>	Mobile number

2.3 Current Bottom Navigation (User)

Tab	Screen	Purpose
Home	HomeScreen	Products, banners, search, filters
Category	CategoryScreen	Category grid → sub-category
Match	ThreadMatchScreen	Camera/gallery thread match
Company	CompanyScreen	Browse supplier companies
Profile	ProfileScreen	Wishlist, settings, logout

2.4 Key User Screen Features

Screen	Key features	Primary API
Home	3-col grid, banners, search, filters, reel nav	GET user/products
Category	Paginated categories, filtered products	GET user/categories
Match	Image upload → matched products	POST user/images/match-thread
Company	Company search, profile, reviews, shade cards	GET user/companies
Product Detail	Zoom, wishlist, WhatsApp, AR, embroidery AI	user/wishlist, user/events
Profile	Phone display, wishlist, language, logout	POST user/auth/logout

3. Company Role — Business Requirements

3.1 Post-Login Routing

```
OTP Verify → Read LoginData.role
├── user/trader → UserBottomMenuScreen (5 tabs)
└── company    → CompanyBottomMenuScreen (4 tabs, no Match)
```

4. Screen-by-Screen: User vs Company

4.1 Home Screen

Aspect	User	Company
UI layout	Same grid, search, filters	Same layout
Products shown	All products	Own company only
Company filter	Available	Hidden
Wishlist shortcut	Visible	Hidden

4.2 Product Reel & Detail

Feature	User	Company
Reel / carousel / zoom	Yes	Yes
Wishlist	Yes	No
Embroidery Match	Yes	No
AR Match	Yes	Optional
WhatsApp share	Yes	Optional
Edit product	No	Future

4.3 Category Screen

Unchanged UI. Products in sub-category scoped to own company when accessed from company shell.

4.4 Thread Match

Excluded for company role — tab hidden, route blocked.

5. Company List & Approval Workflow

5.1 Access States

Status	Can view peer products?	UI action
None	No	"Request Access" button
Pending	No	"Request Pending" badge
Approved	Yes	Navigate to peer products (read-only)
Rejected	No	"Request Rejected" + re-request policy TBD

5.2 Request Flow

Company A → Company List → Select Company B
→ POST company/access-requests { target_company_id }
→ Status: Pending

Company B → Incoming Requests
→ Accept → Company A can view B's products
→ Reject → Access denied

5.3 Proposed APIs

Endpoint	Method	Description
company/peers	GET	Companies with access status
company/access-requests	POST	Send access request
company/access-requests/incoming	GET	Requests received
company/access-requests/{id}/accept	POST	Approve
company/access-requests/{id}/reject	POST	Reject
company/companies/{id}/products	GET	Peer products (if approved)

6. Company Bottom Navigation

Tab	Screen
Home	Own products (same UI as user Home)
Category	Unchanged category UI
Companies	Peer list + approval workflow
Profile	Full company details (separate layout)

Match tab excluded.

7. Company Profile UI (Separate Layout)

Section	Content
Header	Logo, banner, company name
Contact	Email, phone, WhatsApp, website
Address	Full address fields
Social	All social links
Shade cards	If enabled
Access requests	Incoming requests with badge
Account	Language, legal, logout, delete

Not included: Wishlist (user-only feature).

8. Data Model Extensions

LoginData (extend)

Field	Type
role	user company
companyId	UUID (when role = company)

CompanyAccessRequest (new)

Field	Description
id	Request UUID
requesterCompanyId	Company A
targetCompanyId	Company B
status	pending approved rejected
message / rejectionReason	Optional text

9. Security Rules

- Server enforces `company_id` from token — client cannot override
- Peer products require approved access request
- Company role blocked from wishlist and match-thread APIs
- Peer product detail is read-only

10. Implementation Phases

Phase	Deliverables
1 — Foundation	Role routing, company bottom nav, API config
2 — Scoped Catalog	Company home, category scope, restricted detail
3 — Peer Access	Company list, request/approve/reject workflow
4 — Company Profile	Dedicated profile UI, incoming requests
5 — Polish	Push notifications, analytics, QA

11. Acceptance Criteria

1. User role experience unchanged
2. Company lands on 4-tab shell (no Match)
3. Company Home shows only own products
4. Category UI unchanged; products scoped to own company
5. Product detail hides wishlist & embroidery match for company
6. Company list shows access status per peer

7. Request / accept / reject workflow functional
8. Approved peers' products viewable read-only
9. Separate company profile layout with full details

12. Open Questions

1. Company-specific banners on Home?
2. WhatsApp share & AR Match for company users?
3. Re-request policy after rejection?
4. Product create/edit in mobile v1?
5. Push notifications for access workflow?

13. Appendix — Existing Code Map

Area	File path
Navigation	lib/view/bottomMenu/bottom_menu_screen.dart
Home	lib/view/home/home_screen.dart
Category	lib/view/category/
Match	lib/view/threadMatch/thread_match_screen.dart
Company browse	lib/view/company/
Product	lib/view/productDetail/
Profile	lib/view/profile/profile_screen.dart
API config	lib/app_config.dart
Auth model	lib/model/login_response.dart
